

The GridLab Beamer theme

What it gives you beyond plain Beamer

Prof. Fabrizio Sossan

Gridlab, HES-SO Valais-Wallis

fabrizio.sossan@hevs.ch

Slides compiled on: August 25, 2026

Slide furniture

Blocks

Coloured title bar, light background — for a definition, a result, an assumption.

- Bullets take the accent colour
 - second level is an en-dash
 - ▶ third is a small triangle

Also from the theme

The title bar above, the footer below, and the divider slide before this one, which every `\section` produces.

- `fitemize` and `fenumerate` spread their items over the whole frame
- `\cornerlogo` puts a logo on every slide
- `\closingslide` ends the deck — last slide here

\topicslide — a divider on demand

Macros

Upright constants: $\text{SOC}_{\max}$

A labelled underbrace, no wide gap:

$$\underbrace{P_t + Q_t}_{\text{apparent power}}$$

A forecast: *value at t, known at k*: $\mathbf{P}_{k|t}$

Phasors: $230/\underline{30^\circ}$ Cancelling: $\cancel{x}$

```

 $\const{\text{SOC}}_{\max}$ 
 $\left[ \underbrace{P_t + Q_t} \right.$ 
    {apparent power}  $\left. \right]$ 
 $\mathbf{P}_{t|k}$ 
 $230\angle 30^\circ$ 
 $\cancel{x}$ 
    
```

`mathtools`, `empheq`, `cancel` and `steinmetz` are loaded for you.

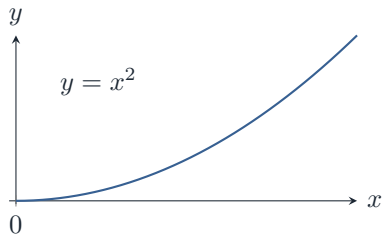

Quotations: “the grid is a queue with physics”

Open questions: **TODO: add the 2026 measurements**

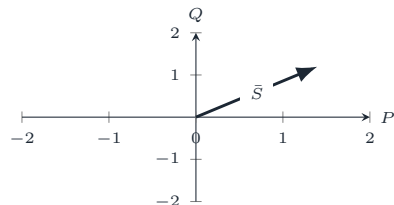

And this slide carries a watermark.

```
\say{the grid is a queue with physics}  
\todo{add the 2026 measurements}  
\watermark{DRAFT}{8}
```

Plots and diagrams

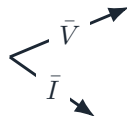

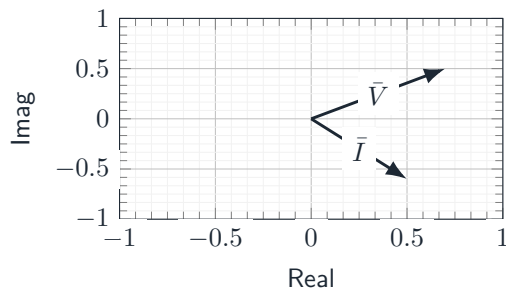

`q1simpleplot{w}{h}{x}{y}` — axes through the origin, labels at the arrow tips, no ticks to read. Text in the plot uses `\plotfont`, `\small` by default.

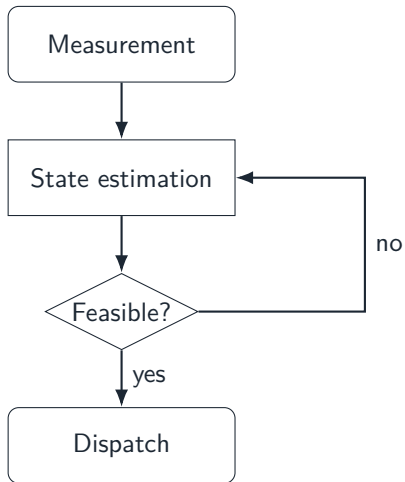

`plot{w}{h}{xmin}{xmax}{ymin}{ymax}`
`{step}{P}{Q}`, with `\vectorarrow` between two axis coordinates. This one is shrunk further by `\renewcommand{\plotfont}{\tiny}`.

Complex plane

Left: `phasorbox`, gridded with labelled axes. Right: `phasorbox_clean`, the same without them.

Node styles startstop, process, decision and arrow, with TikZ already loaded.

Making it yours

```
\def\themeprimary{376092}    % main  
\def\themesecondary{ED7D31}  % accent  
\usetheme{gridlab}
```

Set before the theme is loaded; every title bar, divider, bullet and block follows.

```
\def\titlelogos{...}  
\def\titlebottomlogo{logo.png}  
\def\cornerlogo{logo.png}
```

Logos default to the ones shipped with the theme; override them, or set one empty to switch it off.

Start a presentation from `../main.tex`; the theme itself is `../gridlab/beamertthemegridlab.sty`.

Thank you for your attention
